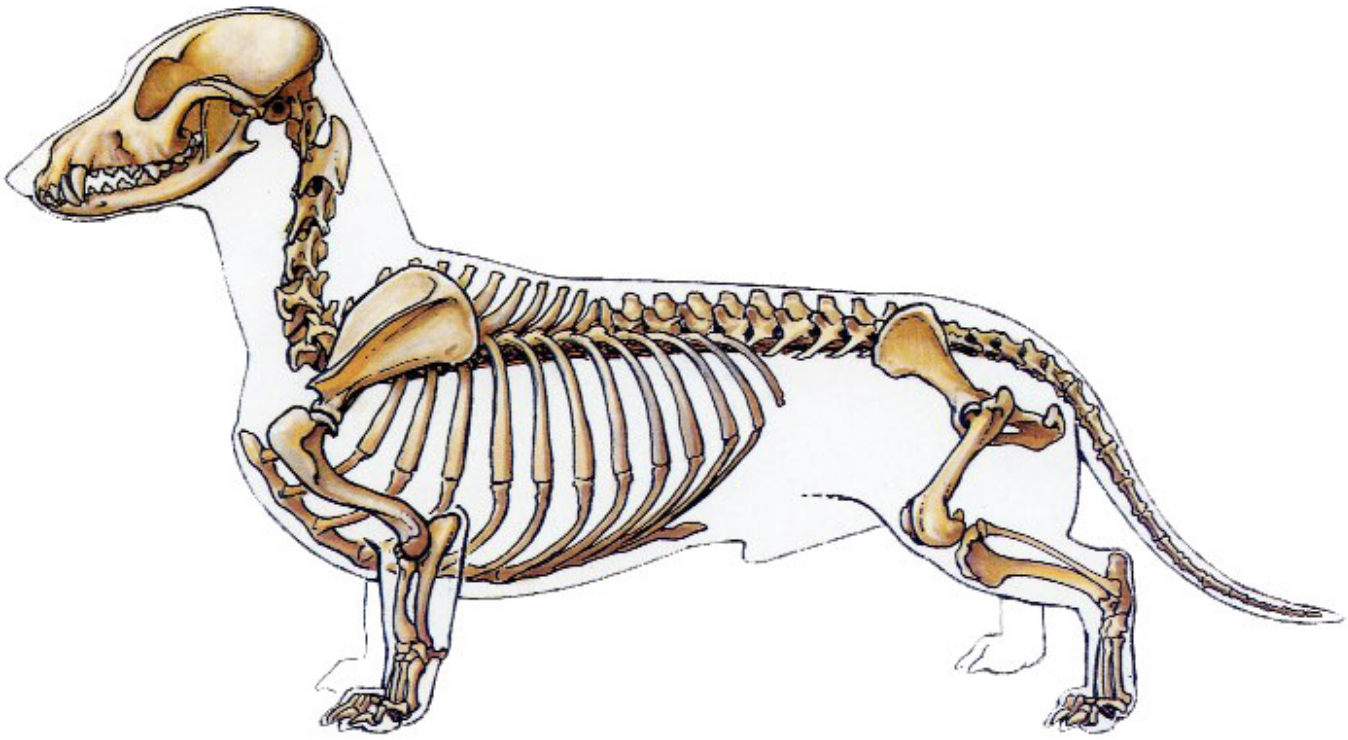
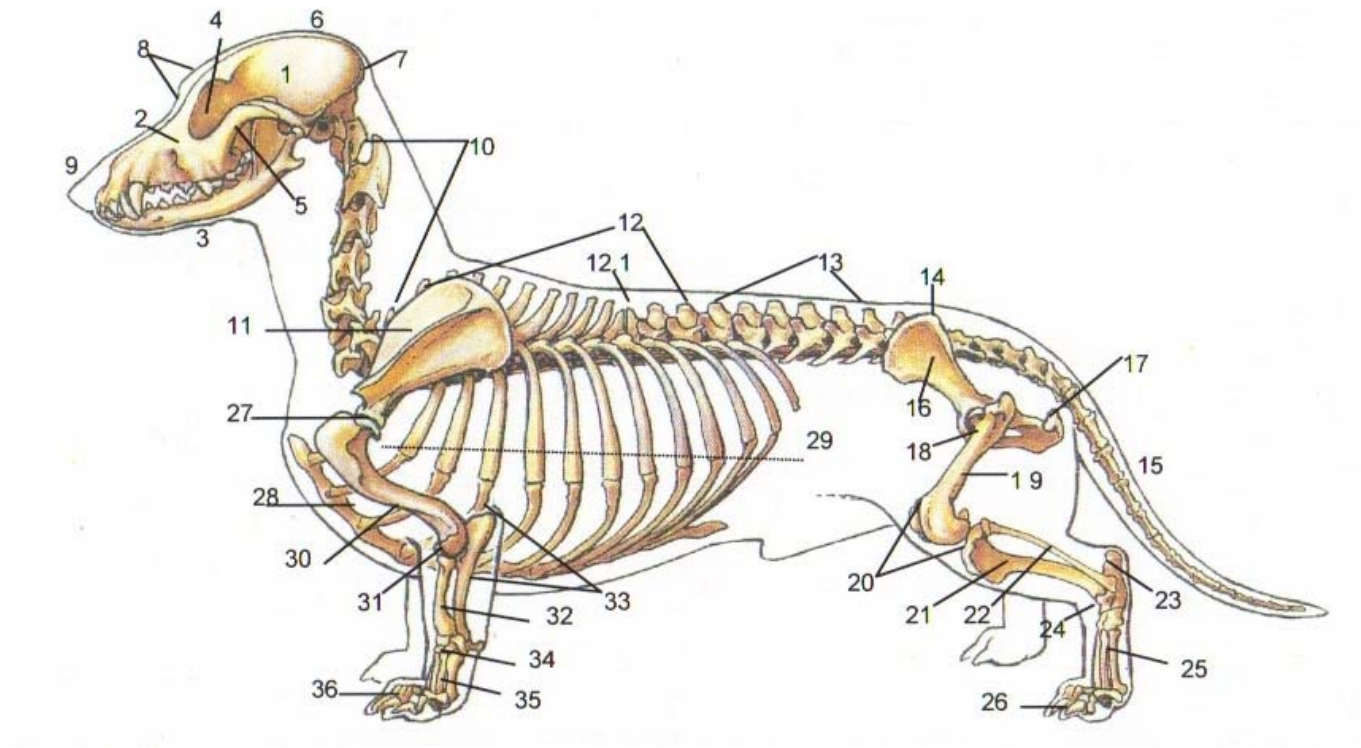
The Skeleton



100.2

The Most Important Skeletal Parts of the Dachshund



1 Brain Case/Cranium

2 Foreface

3 Mandible

4 Eye Socket

5 Zygomatic Arch

6 Sagital Crest

7 Occipital Crest

8 Stop

9 Dorsal Cartilage

10 Cervical Vertebrae (7)

11 Shoulderblade

12 Thoracic Vertebrae (13)

12.1 Transitional Vertebrae/Wechselwirbel

13 Lumbar Vertebrae (7)

14 Sacral Vertebrae (3)

15 Tail (20-23 Vertebrae)

16 Pelvis with Iliac Wing

17 Pelvic/Ischiac Tuber

18 Hip Joint/ Acetabulum

19 Femur

20 Stifle Joint with Patella

21 Tibia

22 Fibula

23 Fibular Tarsal

24 Hock Joint/Tarsus with Remaining 5 Bones

25 Metatarsus with 4 Bones

26 Toes/Phalanges of the Hind Paws

27 Shoulder Joint

28 Sternum

29 Ribs (13)

30 Humerus

31 Elbow Joint

32 Radius

33 Ulna with Olecranon

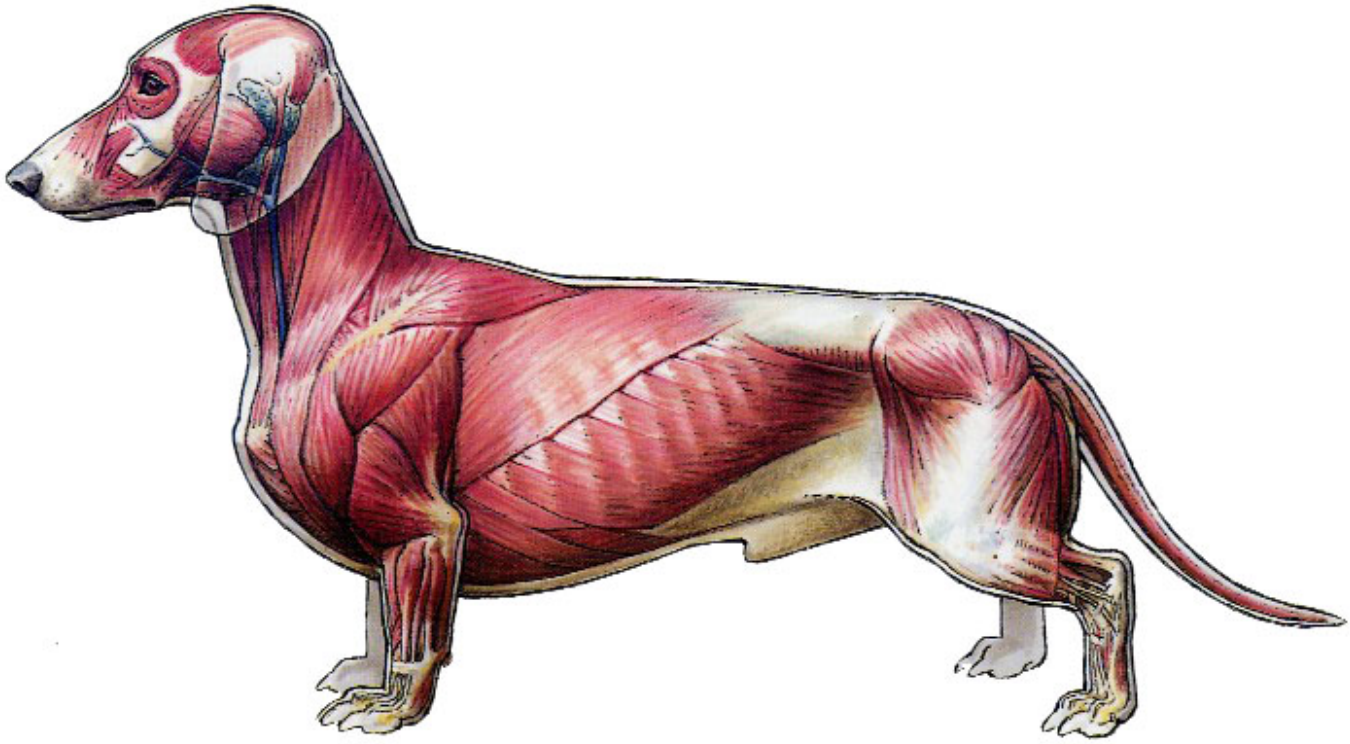
34 Carpus/Wrist

35 Metacarpus Bones

36 Toes/Phalanges of the Front Paws

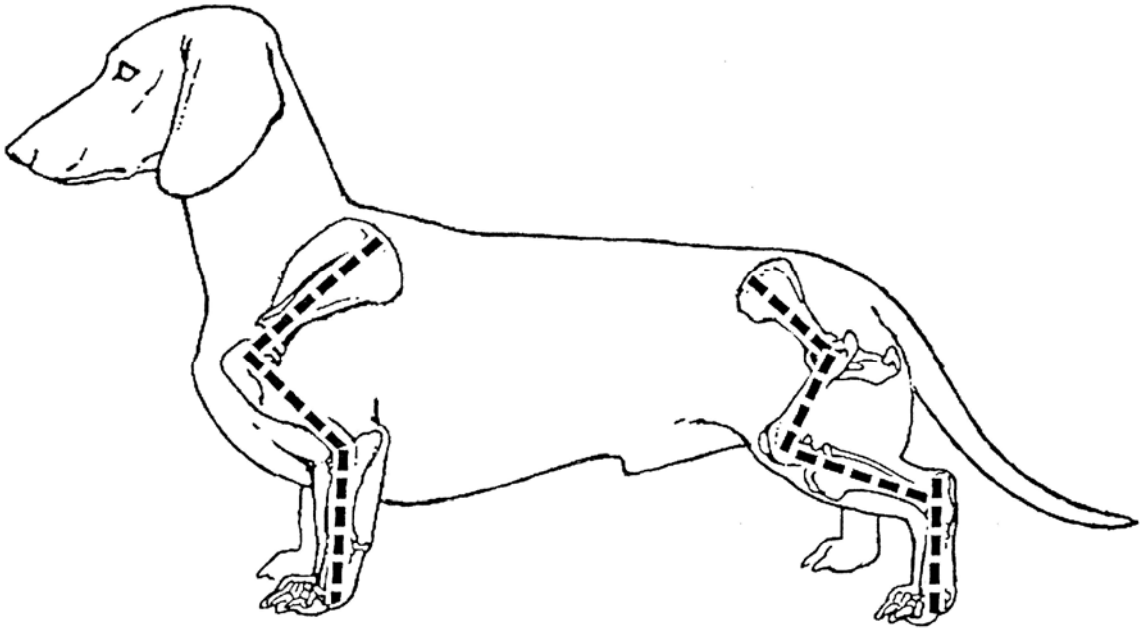
101.1

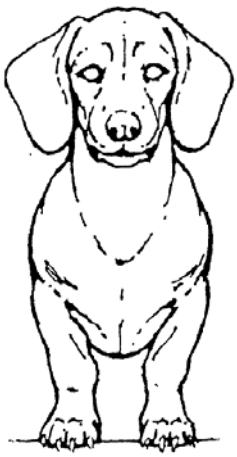
The Musculation

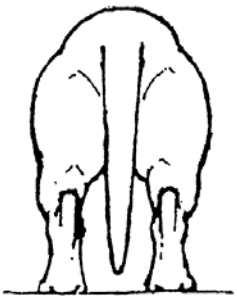


102.1

Correct Placing and Angulation of Fore- and Hindquarters



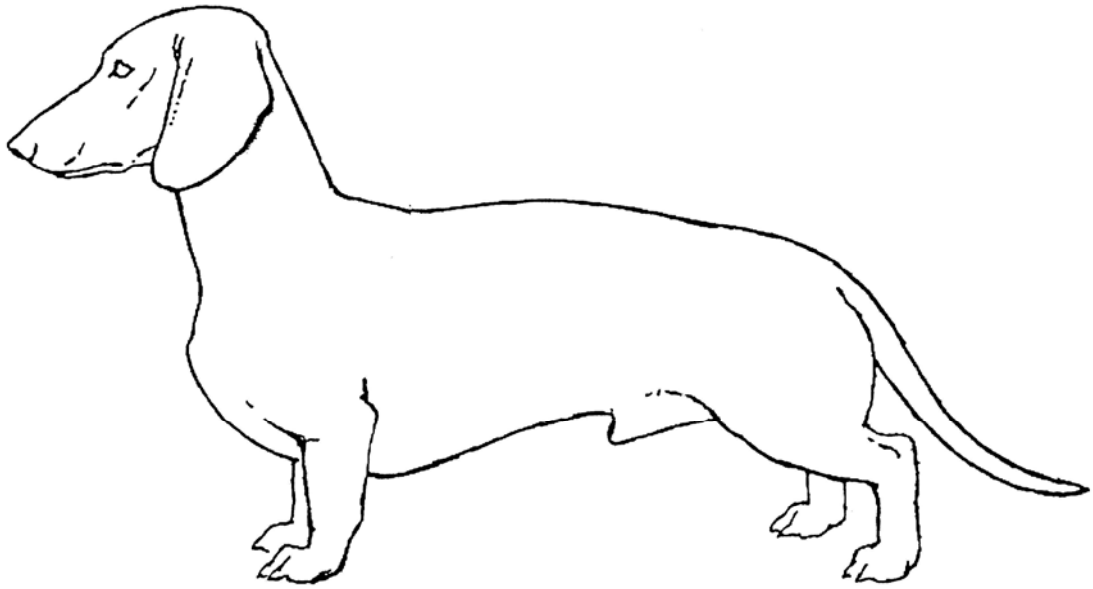




Faults of the Upper Line

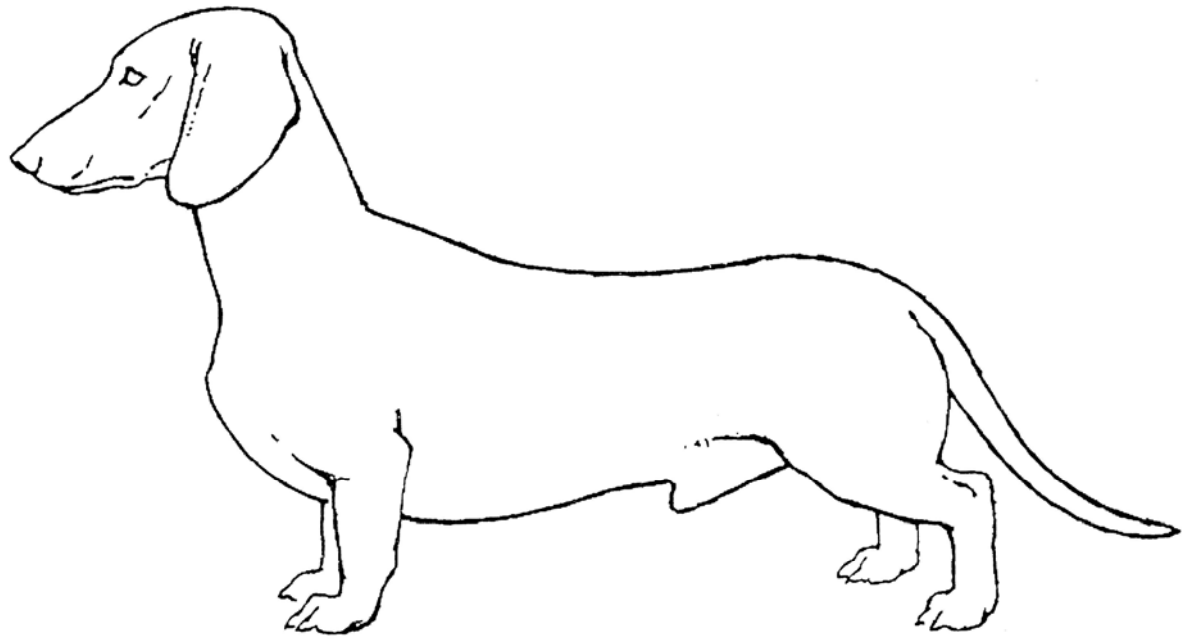
110.1

Roach Back (faulty)



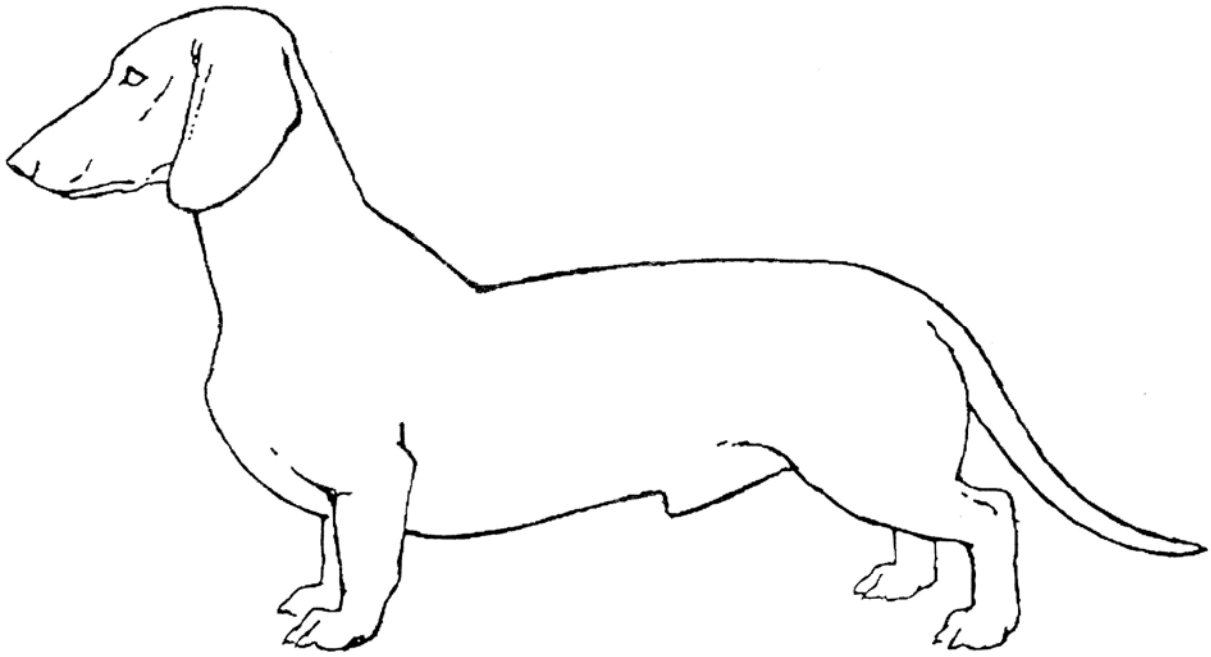
111.1

Hollow Back (faulty)



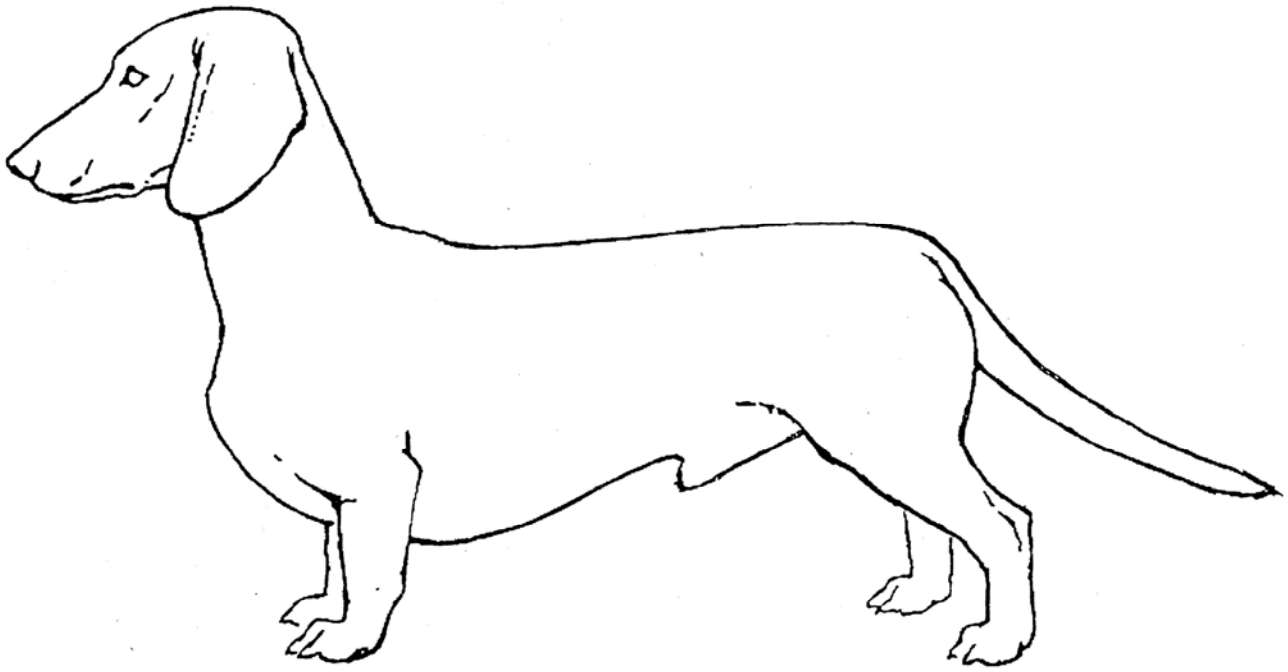
112.1

Pronounced Dip behind Withers (faulty)



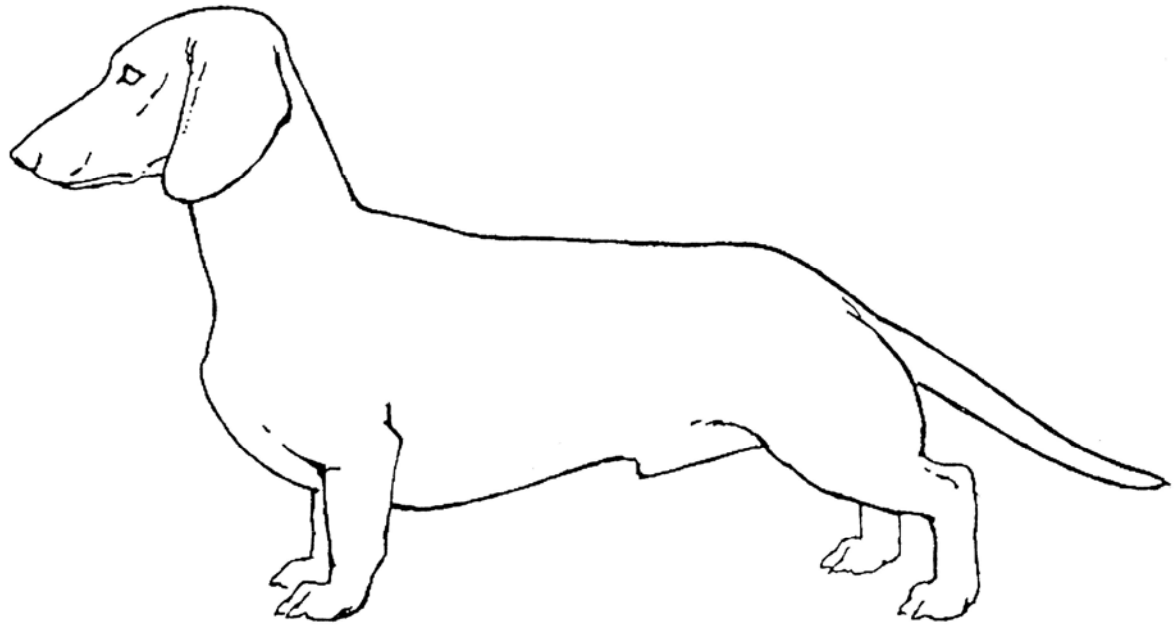
113.1

Inclining Topline – Higher in the Rear (faulty)



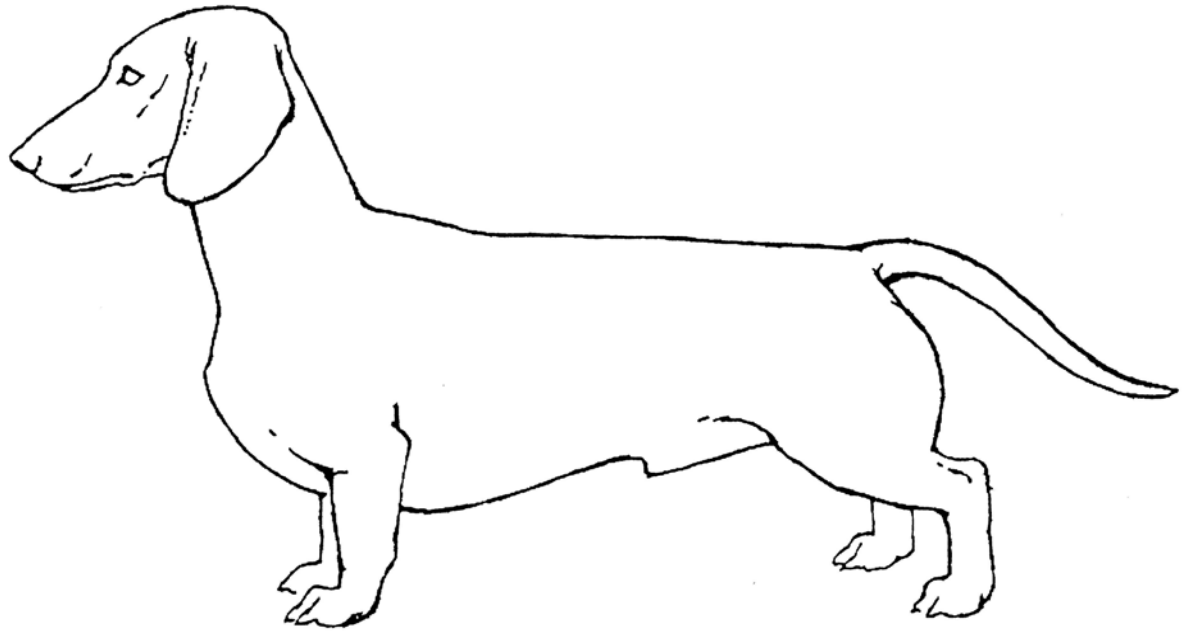
114.1

Severely falling-off Croup (faulty)



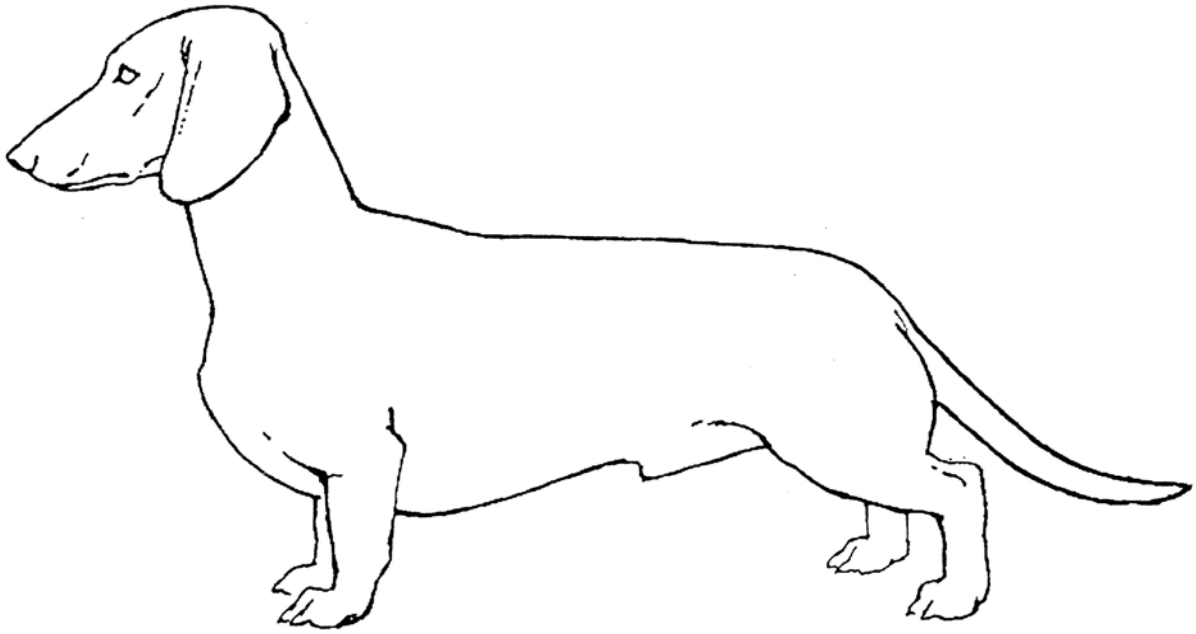
115.1

Tail Set too High (faulty)



116.1

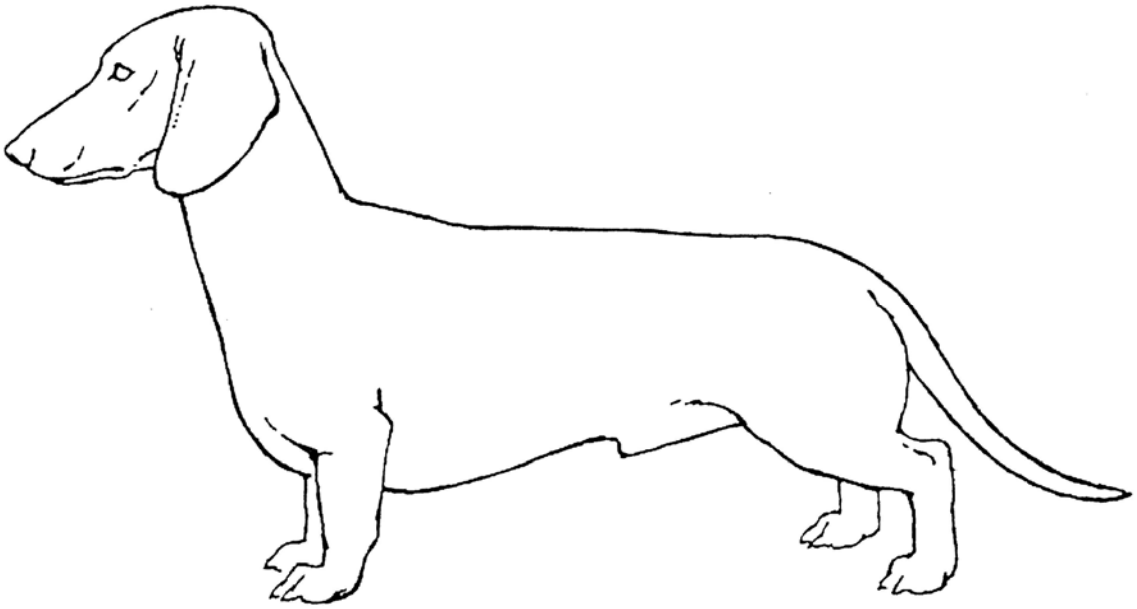
Tail Set too Low (faulty)



Faults of the Chest and Underline

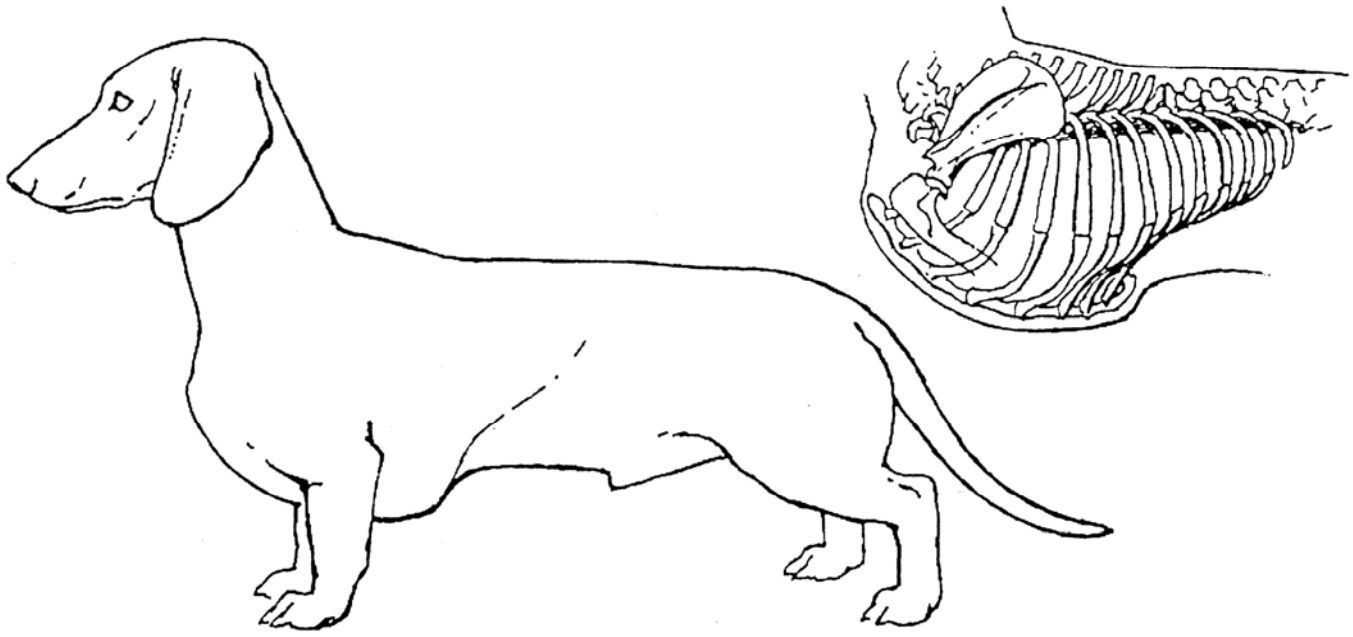
120.1

Insufficient Forechest (faulty)



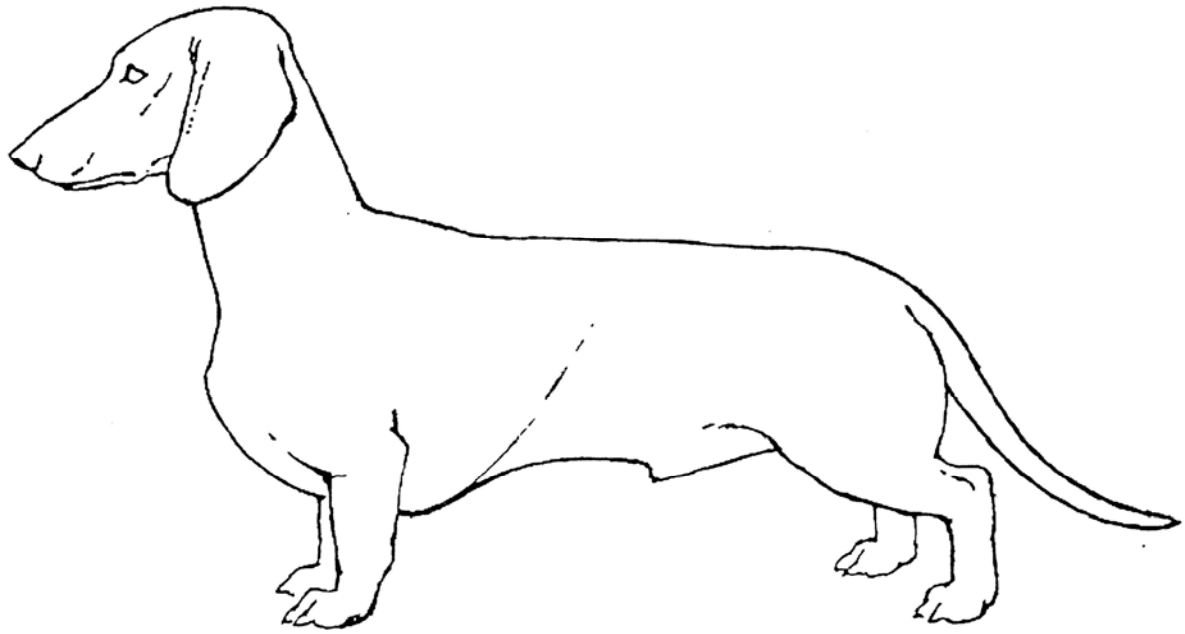
121.1

Cut-off Sternum (Eliminating Fault)



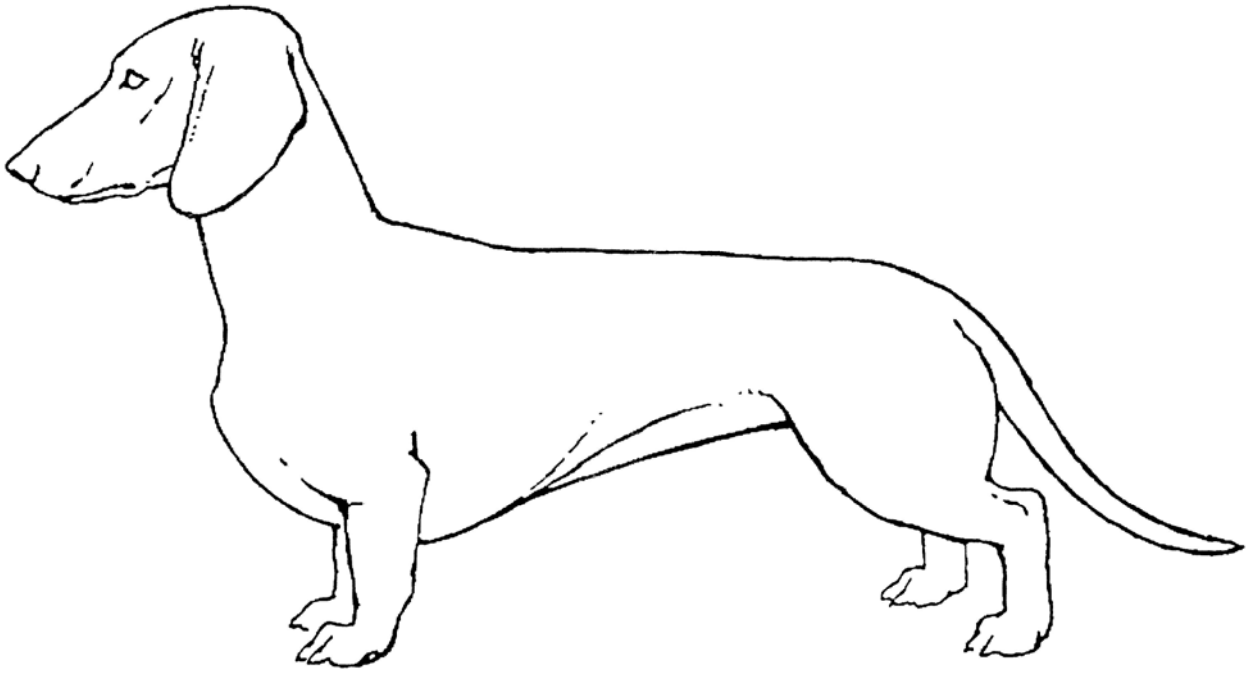
122.1

Short Ribbed Ribcage (faulty)



123.1

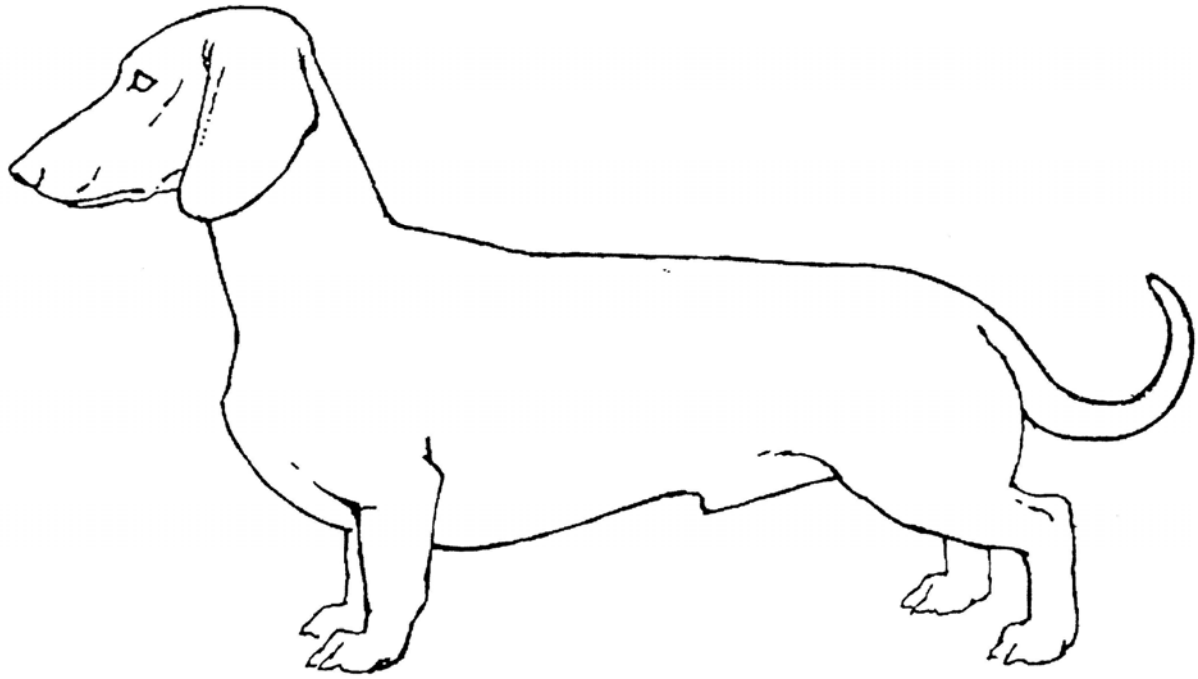
Whippety-Like Tuck-Up (Severe Fault)



Tail Faults

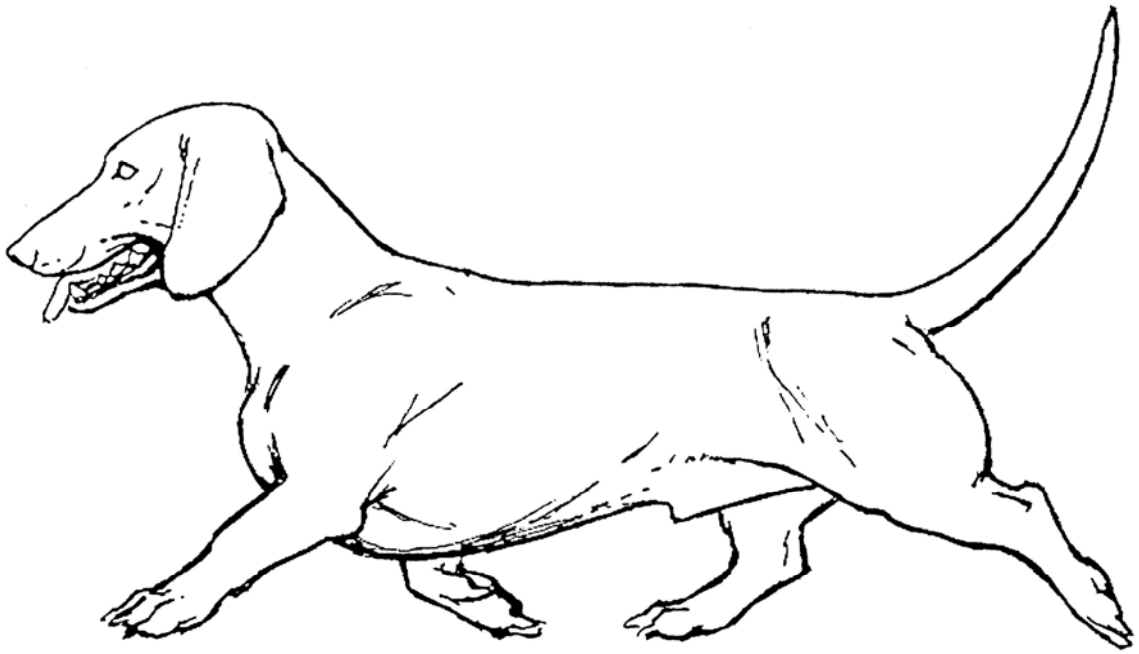
130.1

Sickle Tail (faulty)



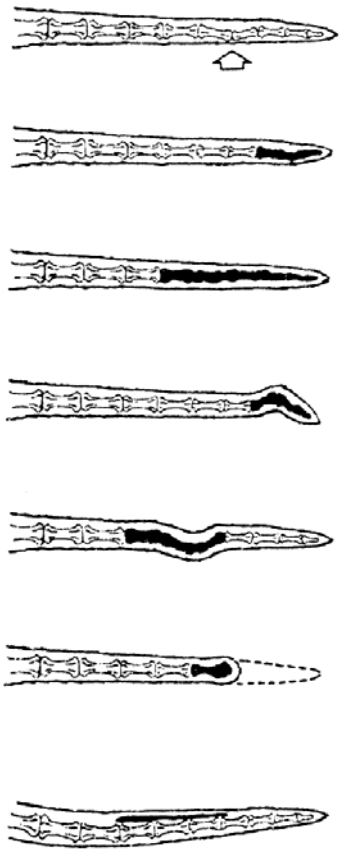
131.1

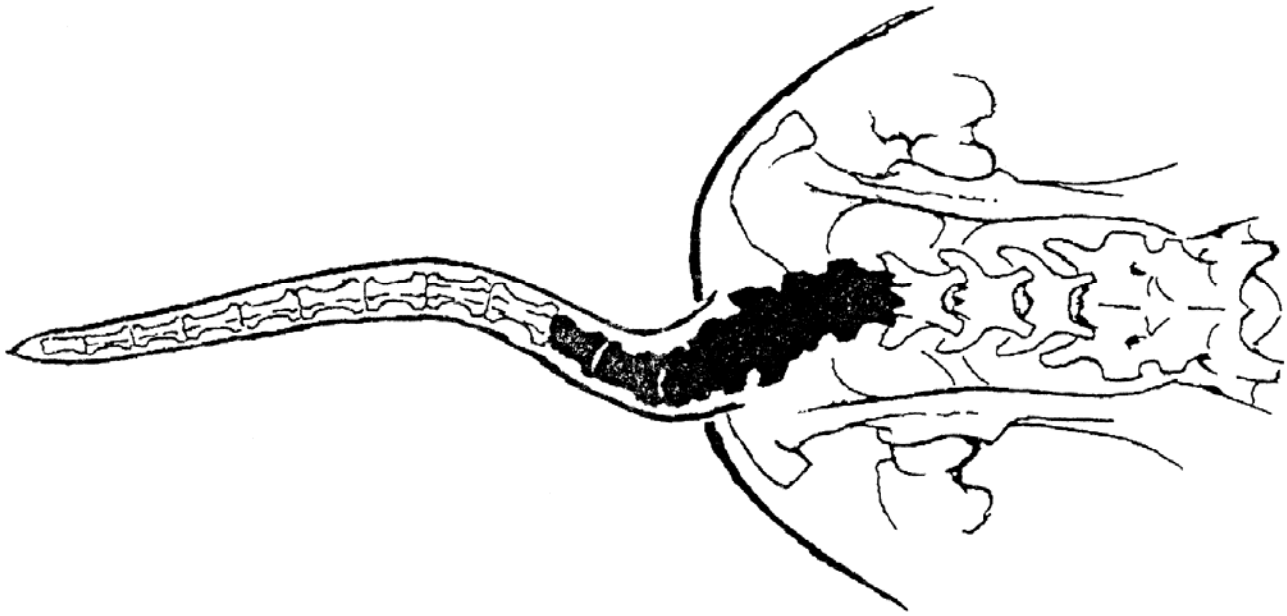
„Gay“ Tail (faulty)



132.1

Hereditary Tail Faults (Eliminating Faults)

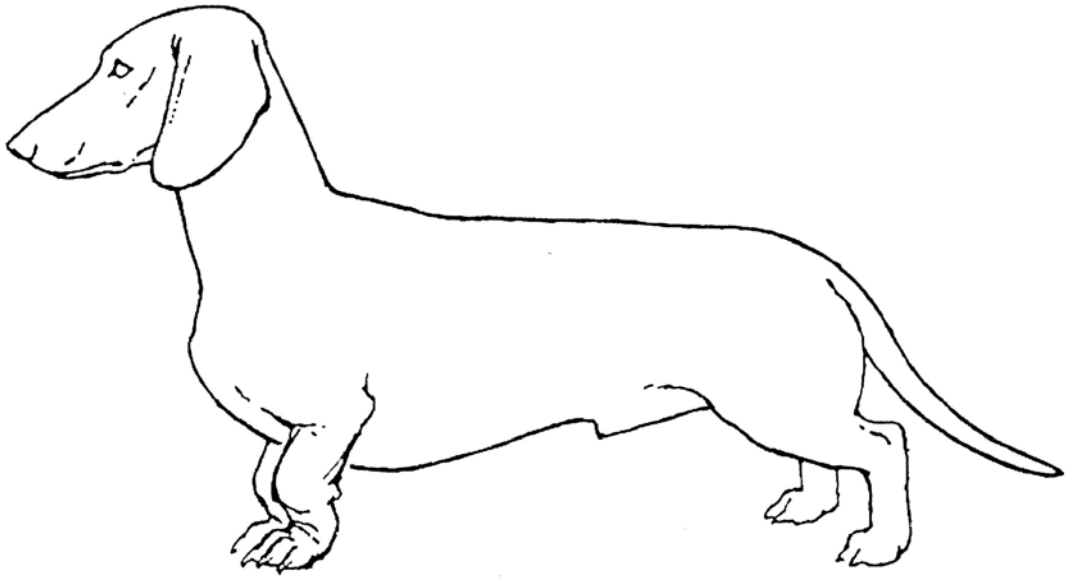




Faults of the Forequarters

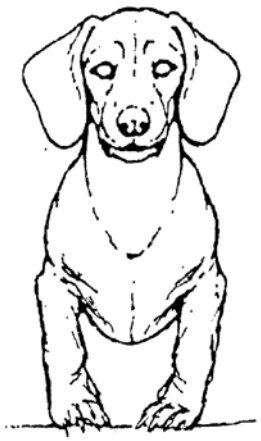
140.1

Knuckling over in the Wrist (Eliminating Fault)



141.1

Toeing In (faulty)



142.1

Toeing Out (faulty)

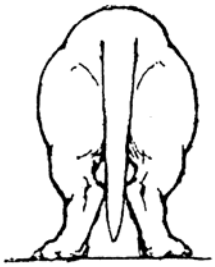
143.1

Severe Narrow Positioning of the Wrists (faulty)

Faults of the Hindquarters

150.1

Cow-Hocked (faulty)

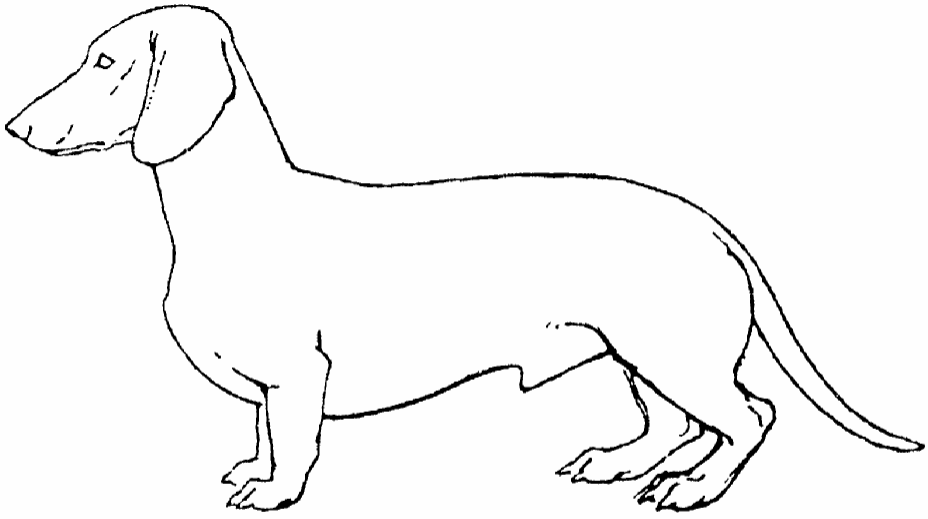


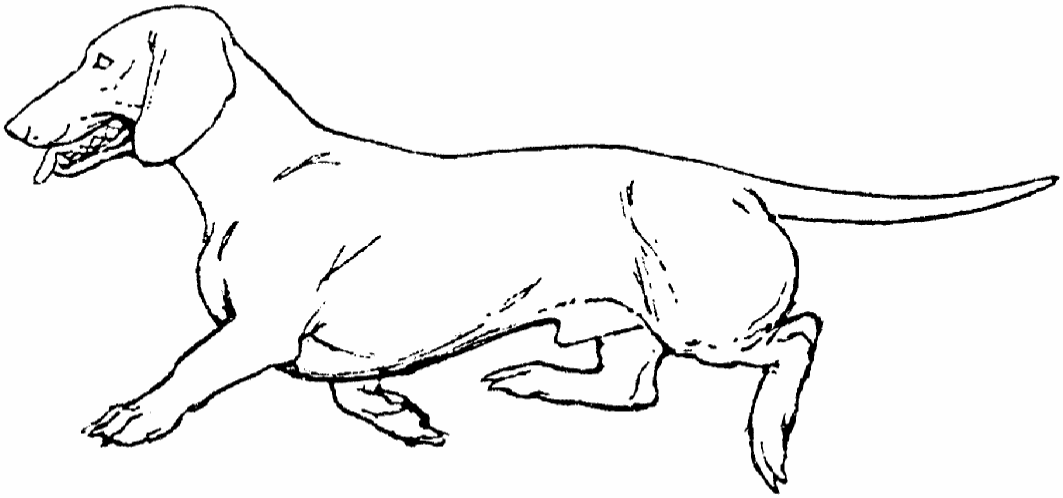
151.1

Bow-Legged (faulty)

152.1

Hindquarters Too Far Under (faulty)

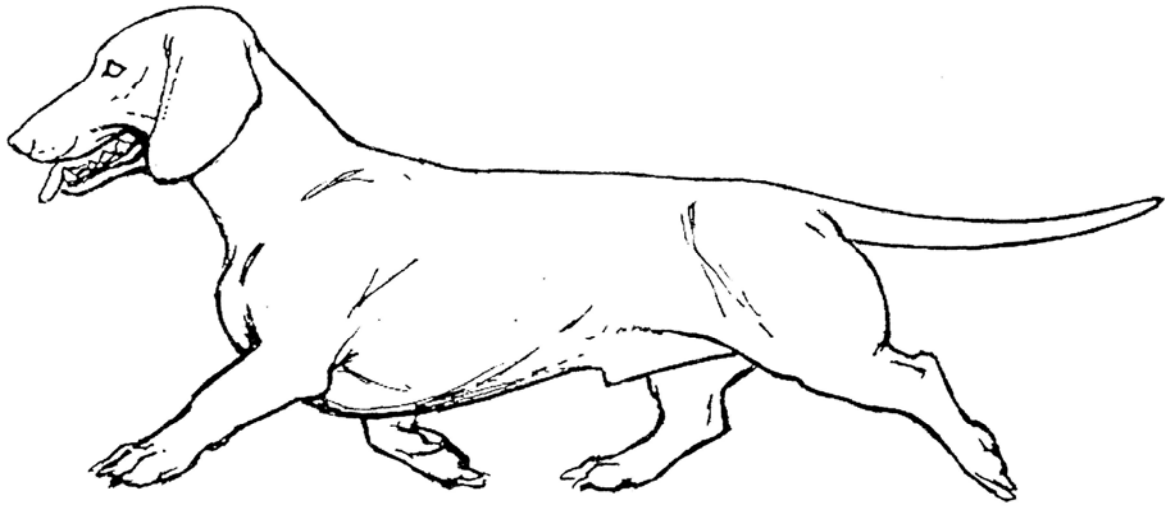




The Gaiting Teckel

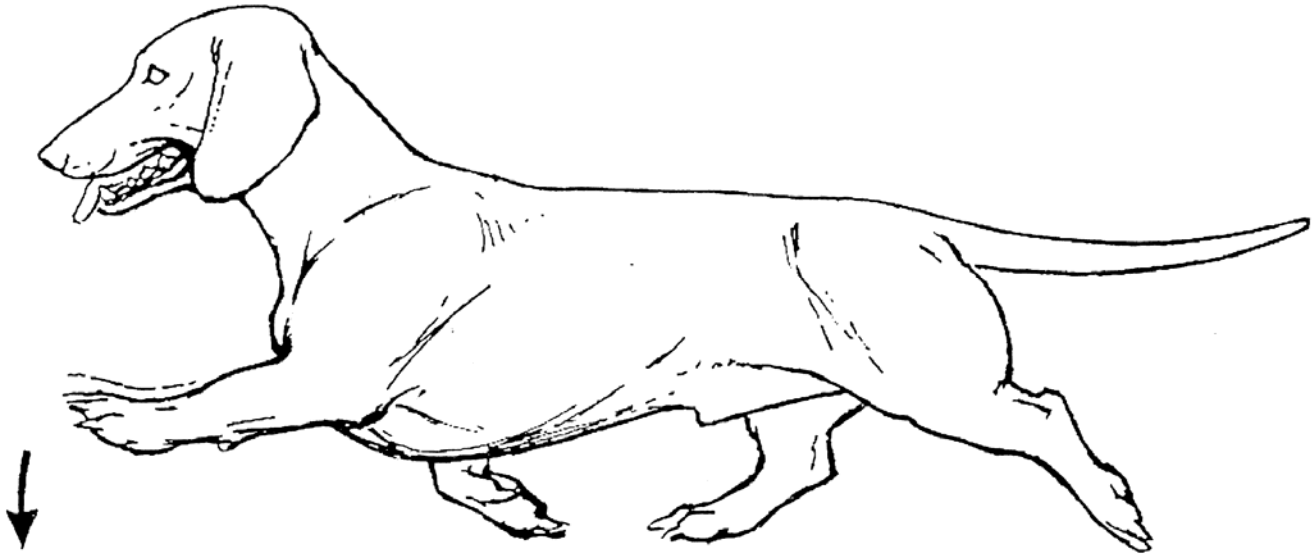
160.1

Correct Step and Drive



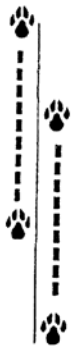
161.1

Goose Stepping or Hackney Gait (faulty)



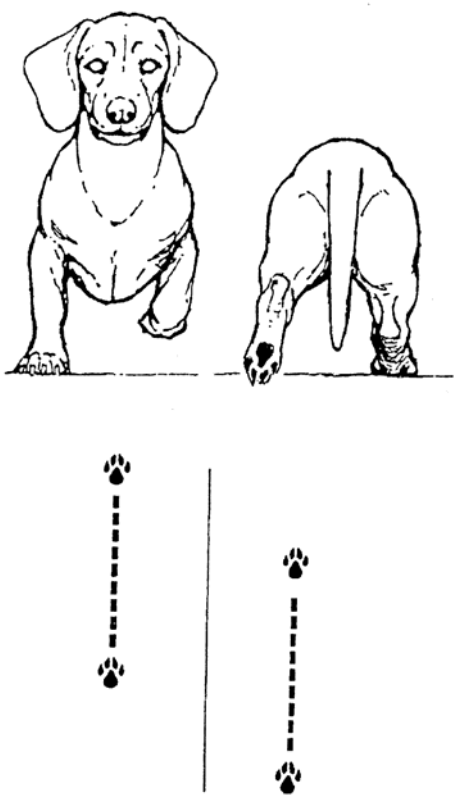
162.1

Gaiting Narrow (faulty)



163.1

Gaiting Wide (faulty)



Dentition and Bite

170.1

Scissor Bite, Teeth and Roots

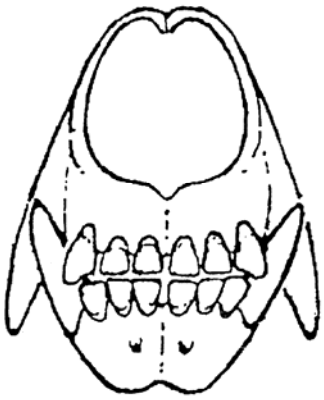
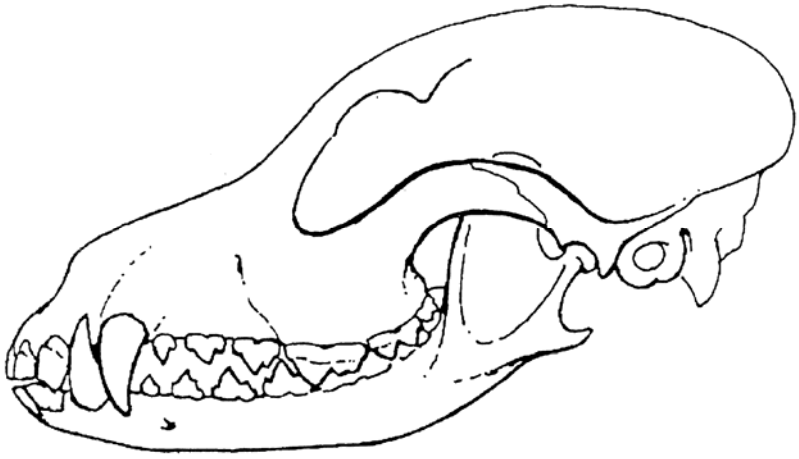
171.1

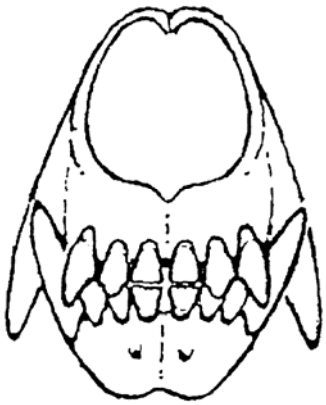
Pincer Bite (tolerated, faulty)

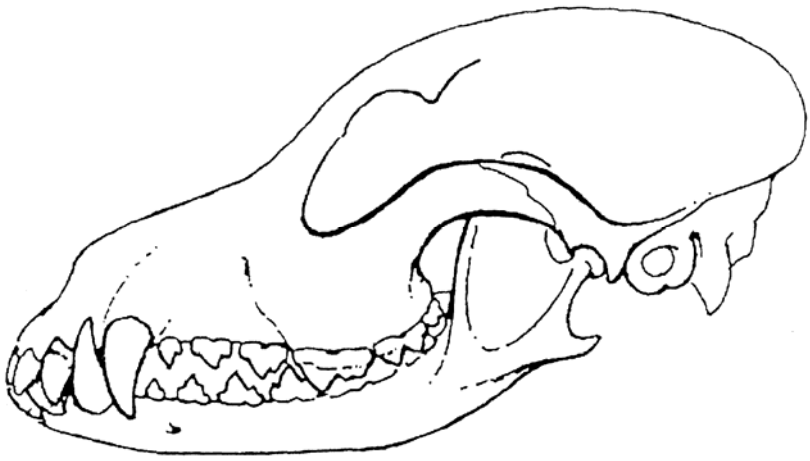




172.1

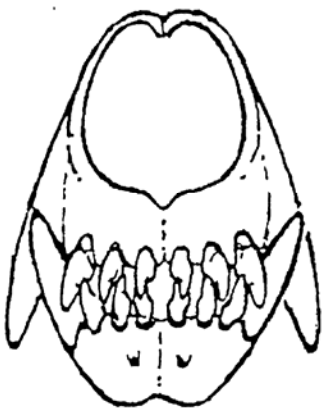
Partial Pincer Bite (tolerated, faulty)

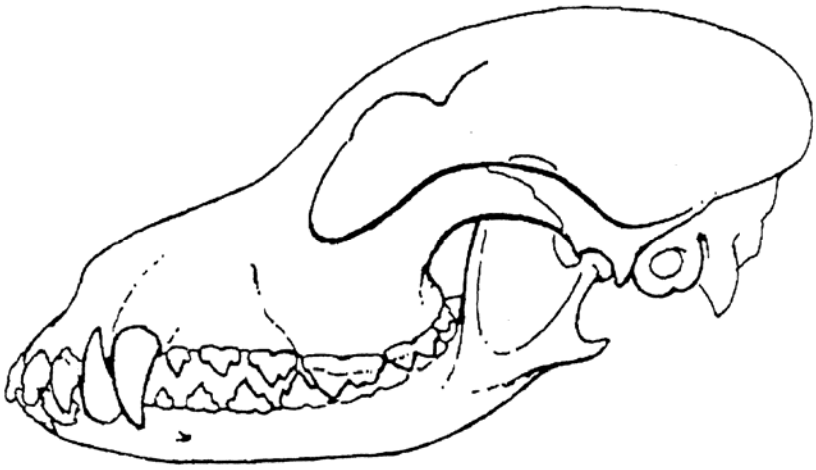




173.1

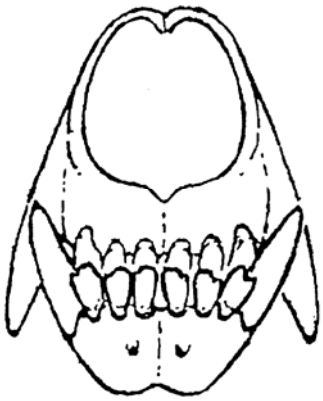
Kulissengebiss [Teeth not in Straight Line, some Teeth even Partially in Front of another Tooth] (faulty)

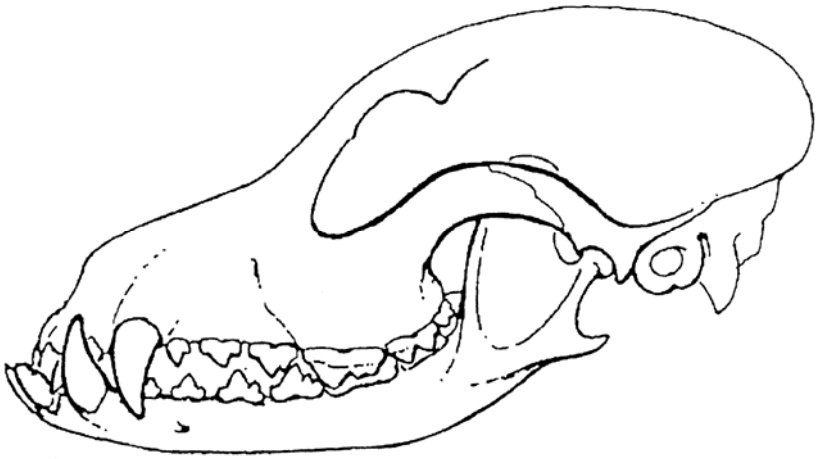




174.1

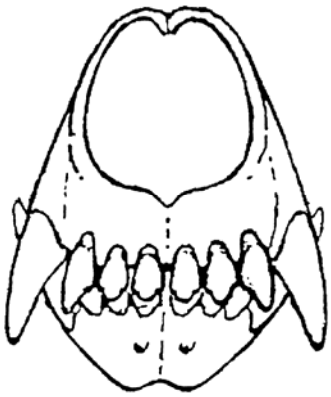
Overshot Mouth (Eliminating Fault)

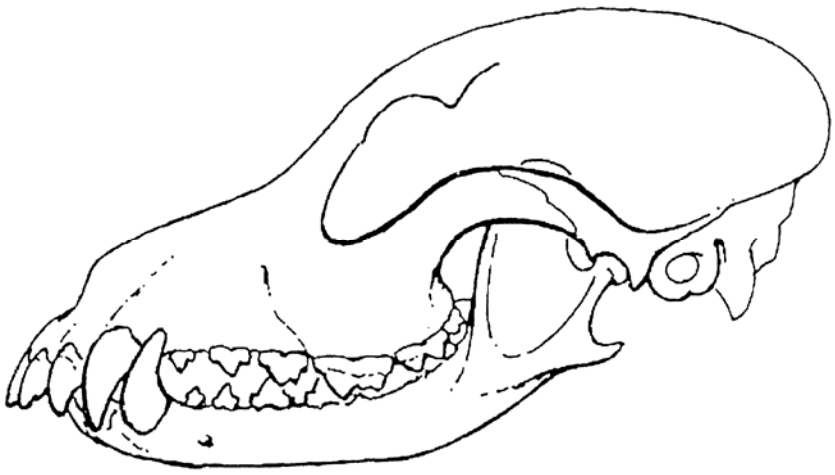




175.1

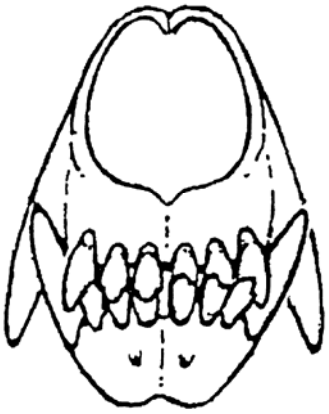
Undershot Mouth (Eliminating Fault)

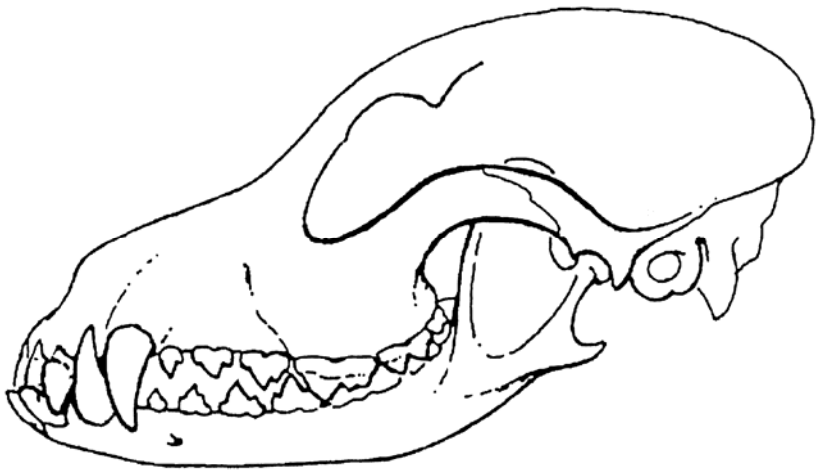




176.1

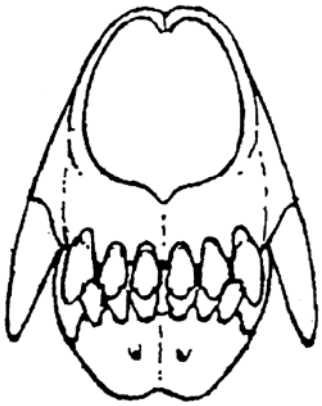
Wry Mouth (Eliminating Fault)

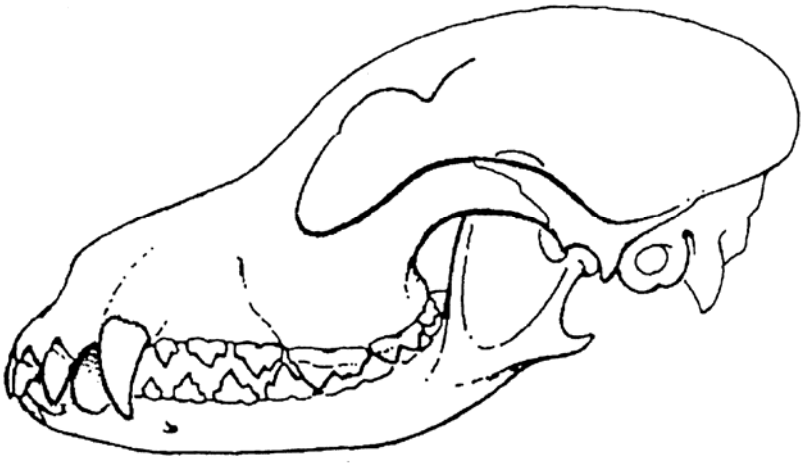




177.1

Faulty Positioning of the Lower Canines (Eliminating Fault)





Dentition Evaluation Table

(According to FCI Standard No. 148, 09 MAY 2001, and the WUT Commentary to the Standard, 2001)

Missing Incisor	disqualified
Missing Canine	disqualified
Base Narrow Canines	disqualified
1 or 2 missing PM1	very good
3 or 4 missing PM1	disqualified
One missing PM2, provided no additional teeth are missing (M3 are not considered)	very good
Missing PM2 plus additional missing tooth (M3 are not considered)	disqualified
One or several missing PM3, PM4, M1 or M2	disqualified
The M3 are never considered	No Fault
Pincer Bite *	very good
Partial Pincer Bite *	very good
Kulissengebiss, Palisadengebiss	disqualified

* Please note article13.2b, last paragraph. Special attention shall be paid to the pincer bite due to advanced age (only applies to teckels of 4 years and older).

At German Conformation shows and Zuchtschaus the pedigrees of teckels, which have received the evaluation score of “disqualified”, shall be collected by the judge and submitted to the Breed Book Office in Duisburg, together with the judge’s report.
